

# PHY1001: Mechanics

**Show steps** in your homework. **Correct answers with little or no supporting work will not be given credit.** Three-star \* \* \* labels are assigned to the most difficult ones.

**Due date:** 2024, April 21st, 23: 59: 00

## 1 Homework Problems for Week 10: Chapter 14 Fluids and Chapter 15 Os- cillation

### 1. \* Buoyancy.

A rock is suspended by a light string. When the rock is in air, the tension in the string is 39.2 N. When the rock is totally immersed in water, the tension is 28.4 N. When the rock is totally immersed in an unknown liquid, the tension is 18.6 N. What is the density of the unknown liquid?

**Answers:**  $\rho = 1.91 \times 10^3 \text{ kg/m}^3$ .

### 2. \* (Halliday C14-P2)

In the figure below, the fresh water behind a reservoir dam has depth  $D = 12 \text{ m}$ . A horizontal pipe 4.0 cm in diameter passes through the dam at depth  $d = 6.0 \text{ m}$ . A plug secures the pipe opening.

(a) Find the magnitude of the frictional force between plug and pipe wall.

**Answers:** The balancing friction  $f = 74 \text{ N}$ .

(b) The plug is removed. What water volume exits the pipe in 3.0 h?

**Answers:** The volume  $V = 1.5 \times 10^2 \text{ m}^3$ .

### 3. \* \* (Halliday C14-P3)

In the figure below, water stands at depth  $D = 30.0 \text{ m}$  behind the vertical upstream face of a dam of width  $W = 250 \text{ m}$ .

(a) Find the net horizontal force on the dam from the gauge pressure of the water (gauge pressure is the pressure difference w.r.t. the external air).

**Answers:**  $F = \frac{1}{2} \rho g W D^2 = 1.10 \times 10^9 \text{ N}$ .

(b) Find the net torque due to that force about a horizontal line through O parallel to the width of the dam. This torque tends to rotate the dam around that line, which would cause the dam to fail.

**Answers:**  $\tau = \frac{1}{6} \rho g W D^3 = 1.10 \times 10^{10} \text{ N}\cdot\text{m}$ .

(c) Find the effective moment arm of the torque  $r_{\text{eff}} \equiv \tau/F$ .

**Answers:** The effective arm  $r_{\text{eff}} = H/3 = 10 \text{ m}$ .

4. \* Fluid Flow. Water runs into a fountain, filling all the pipes, at a steady rate of  $0.750 \text{ m}^3/\text{s}$ .

(a) How fast will it shoot out of a hole 4.50 cm in diameter?

**Answers:**  $v_1 = 472 \text{ m/s}$

(b) At what speed will it shoot out if the diameter of the hole is three times as large?

**Answers:**  $v_2 = v_1/9 = 52.4 \text{ m/s}$

### 5. \* \* (Halliday C14-P57)

In Fig. below, water flows through a horizontal pipe and then out into the atmosphere at a speed  $v_1 = 23.0 \text{ m/s}$ . The diameters of the left and right sections of the pipe are 5.00 cm and 3.00 cm.

(a) What volume of water flows into the atmosphere during a 20.0 min period?

**Answers:**  $19.5 \text{ m}^3$ .

(b) In the left section of the pipe, what is the speed  $v_2$ ?

**Answers:**  $v_2 = 8.28 \text{ m/s}$ .

(c) Find the gauge pressure in the left section of the pipe.

**Answers:** Gauge pressure:

$$p_2 - p_{air} = 2.30 \times 10^5 \text{ Pa.}$$

6. \*\* (Halliday C14-P48)

A pitot tube (Figures below) is used to determine the air-speed of an airplane (relative to the air). It consists of an outer tube with a number of small holes B (four are shown) that allow air into the tube; that tube is connected to one arm of a U-tube. The other arm of the U-tube is connected to hole A at the front end of the device, which points in the direction the plane is headed. At A the air becomes stagnant so that  $v_A = 0$ . At B, however, the speed of the air presumably equals the airspeed  $v$  of the plane.

(a) Use Bernoulli's equation to show that

$$v = \sqrt{\frac{2\rho gh}{\rho_{air}}},$$

where  $\rho$  is the density of the liquid in the U-tube and  $h$  is the difference in the liquid levels in that tube.

(b) Suppose that the level difference  $h$  is 20.0 cm in the tube. What is the plane's speed relative to the air? The density of the air is  $1.03 \text{ kg/m}^3$  and that of the liquid is  $810 \text{ kg/m}^3$ .

**Answers:**  $v = 55.5 \text{ m/s}$ .

7. \*\* As shown below, the Venturi meter can be used to measure flow speed in a pipe. The narrow pipe part of the pipe is called the throat. Derive an expression for the flow speed  $v_1$  in terms of the cross-sectional areas  $A_1$  and  $A_2$  and the difference in height  $h$  of the liquid levels in the two vertical tubes.

**Answers:**

$$v_1 = \sqrt{\frac{2gh}{(A_1/A_2)^2 - 1}}.$$

8. \*\*\* A large bucket of height  $H$  and cross-sectional area  $A_1$  is filled with water. The top is open to the atmosphere. There is an opening faucet of area  $A_2$ , which is much smaller than  $A_1$ , at the bottom of the bucket.

(a) Show that when the height of the water is  $h$ , the speed of the water leaving the faucet is approximately  $\sqrt{2gh}$ .

(b) Show that if  $A_2 \ll A_1$ , the rate of change of the height  $h$  of the water is given by

$$\frac{dh}{dt} = -\frac{A_2}{A_1} \sqrt{2gh}.$$

(c) Find  $h$  as a function of time if  $h = H$  at  $t = 0$ .

**Answers:**

$$h = \left( -\frac{A_2}{A_1} \sqrt{\frac{g}{2}} t + \sqrt{H} \right)^2$$

(d) Find the total time needed to drain the bucket if  $H = 2.00 \text{ m}$ ,  $A_1 = 0.800 \text{ m}^2$ , and  $A_2 = 1.00 \times 10^{-4} \text{ m}^2$ .

**Answers:**  $6.39 \times 10^3 \text{ s}$

9. \* The position of a particle is given by  $x = 2.5 \cos \pi t$ , where  $x$  is in meters and  $t$  is in seconds.

(a) Find the maximum speed and maximum acceleration of the particle.

**Answers:**  $v_{max} = 7.9 \text{ m/s}$ ;  $a_{max} = 25 \text{ m/s}^2$

(b) Find the velocity and acceleration of the particle when  $x = 1.5 \text{ m}$ .

**Answers:**  $v = \mp 6.28 \text{ m/s}$ ;  $a = -14.8 \text{ m/s}^2$ .

10. \* Simple Harmonic Oscillation

(a) Show that  $A_0 \cos(\omega t + \delta)$  can be written as  $A_s \sin(\omega t) + A_c \cos(\omega t)$ , and determine  $A_s$  and  $A_c$  in terms of  $A_0$  and  $\delta$ .

**Answers:**  $A_s = -A_0 \sin \delta$ , and  $A_c = A_0 \cos \delta$

(b) Relate  $A_c$  and  $A_s$  to the initial position and velocity of a particle undergoing simple harmonic motion.

**Answers:**  $A_c = x(0)$  and  $A_s = v(0)/\omega$
